

Azure security evidence, made inspectable.

Omar Ba Jamel | Azure Cloud Security Portfolio | v1.0.0

PROJECT SNAPSHOT

NIS2-aligned secure Azure landing zone and security operations platform

A reproducible portfolio case study joining governance, identity, detections, incident response, risk, cost controls, and audit-ready evidence across a fictional German marketplace.

5

Terraform modules

14

Sentinel rules

27

scored risks

20

mapped controls

WHAT I BUILT

- Enterprise landing-zone reference + isolated lab
- Zero Trust identity, RBAC, CA, PIM, and JML
- Sentinel analytics, hunts, workbooks, and SOAR
- INC-001 investigation and response evidence
- NIS2/BSIG, ISO 27001, BSI, and MCSB mapping

HOW IT WAS VERIFIED

- Terraform fmt/init/validate + native test
- 14/14 malicious and 14/14 benign fixtures
- 8 bilingual routes; desktop and mobile QA
- 0 axe A/AA violations across 3 representative scans
- Public privacy and secret-pattern gates

EVIDENCE-LED OUTCOMES

738

synthetic events
90 days; fixed seed

6m / 9m / 48m

simulated INC-001
exercise timings

EUR 20

full-run ceiling
live apply remains gated

TRUTHFULNESS BOUNDARY

Synthetic portfolio data. Plan/fixture validated. No customer or tenant data.
